CSC309, Weekly Report 1

February 13, 2015

Please visit https://trello.com/b/cXmtQocZ/csc309 to see overall project plan/status

Alec Brunelle (g3brunel)
- Set up boilerplate views pertaining to models and controllers
- Finished a client-side form validator which will eventually be used for all forms
- Started Carrierwave file uploading which will be used for avatar pictures on profiles

Benson Chan (g3chanbf)
- Getting up to speed with Ruby on Rails.

Chris Sandison (g3flylo)
- Added in Devise to generate user accounts + user session abilities. These include signing up, logging in, session management and profile editing
- Initialized rspec and cucumber testing framework
- Created form that gathers extra information from user upon signup, added tests for user signup, login and information gathering
- Initialized user landing page + bare user dashboard
- Model creation + association building for objects like communities and projects
- Currently working on community project creation, management and editing page. I have also initialized the funding rewards system and will be integrating that into the project model

Timo Vink (c4vinkti)
- Acquired the domain name "community-fund.ca" and set up hosting for the site.
- Set up a continuous integration server to automatically run tests and deploy to our development and production environments.
- Minor progress on admin-level functionality, focusing on making certain pages only accessible to admin users as well as some extremely basic analytics.
